## CURRICULUM VITAE

Giuseppe Iotti graduated in Electronic Engineering at Bologna University on 05/03/1982.

He entered KOPPEL A.W. in 1983, a company that designs, produces and installs lifts since 1958. He became its General Director a few years later.

Mr Iotti is currently a member of the Lifts Commission of the UNI (Italian national standardisation body), and chairs the sub-commission UNI GL6 on the “Safety improvement of existing lifts”.

Since a few years he represents UNI at the CEN/TC10 (European standardisation body – lifts group) in the working groups WG1 (EN 81-1/2), WG6 (fire prevention), and WG 10 (Safety improvement of existing lifts).

He participates – as representative of the SMEs lift manufacturers and installers – in the works of the European Commission Lift Working Group.

In 2000 he has co-written with Mr Fornasari, the book “Lifts and elevation devices”, published twice by Maggioli editions in Italy.

In 2005 he has again co-written with Mr Fornasari the book “Improvement and maintenance of safety in working lifts”.

He has published several articles on different lift issues in technical magazines such as “Elevatori”, “Sviluppo Impresa” and “Modulo”; some of them have been translated for European magazines on the lift sector.

He has held some training courses and conferences in Italy, organised by the lift association ANACAM, in particular on the standards EN 81-80 (Safety improvement of existing lifts) and UNI 10411-1 (Italian standard on lift modernising).

He presented a report during the Congress ELEVCON in Milan, organised by IAEE (International association of lift engineers). This report was published in 2002 on “Elevator Technology 12”, in the section “*The future implementation in Europe of the Global Essential Safety Requirements*”.
